Contents

Interpreting Maps

Designed to enhance your knowledge and enjoyment of the atlas, these pages explain map principles, scales, symbology and how to locate information quickly.

3 Map Projections
4-5 Using This Atlas

Geographic Comparisons

These eight pages contain flags and important facts about each independent country, plus dimensions of the earth's major mountains, longest rivers and largest lakes and islands.

6-11 World Flags & Reference Guide
12-13 World Statistics

Maps of the World

New maps, derived from a computer database, accurately present political detail while proprietary map projections show the most distortion-free views of the continents.

Map Projections

Simply stated, the mapmaker's challenge is to project the earth's curved surface onto a flat plane. To achieve this elusive goal, cartographers have developed map projections — equations which govern this conversion of geographic data.

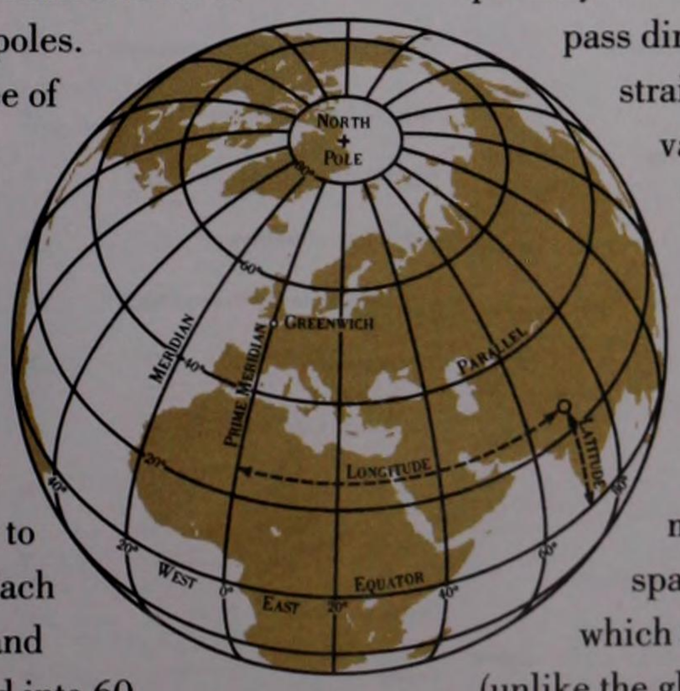
This section explores some of the most widely used projections. It also introduces a new projection, the Hammond Optimal Conformal.

General Principles and Terms

The earth rotates around its axis once a day. Its end points are the North and South poles; the line circling the earth midway between the poles is the equator. The arc from the equator to either pole is divided into 90 degrees of latitude. The equator represents 0° latitude. Circles of equal latitude, called parallels, are traditionally shown at every fifth or tenth degree.

The equator is divided into 360 degrees. Lines circling the globe from pole to pole through the degree points on the equator are called meridians, or great circles. All meridians are equal in length, but by international agreement the meridian passing through the Greenwich Observatory near London has been chosen as the prime meridian or 0° longitude. The distance in degrees from the prime meridian to any point east or west is its longitude.

While meridians are all equal in length, parallels become shorter as they approach the poles. Whereas one degree of latitude represents approximately 69 miles (112 km.) anywhere on the globe, a degree of longitude varies from 69 miles (112 km.) at the equator to zero at the poles. Each degree of latitude and longitude is divided into 60 minutes. One minute of latitude equals one nautical mile (1.15 land miles or 1.85 km.).



How to Flatten a Sphere: The Art of Controlling Distortion

There is only one way to represent a sphere with absolute precision: on a globe. All attempts to project our planet's surface onto a plane unevenly stretch or tear the sphere as it flattens, inevitably distorting shapes, distances, area (sizes appear larger or smaller than actual size), angles or direction.

Figure 1 **Mercator Projection**

Since representing a sphere on a flat plane always creates distortion, only the parallels or the meridians (or some other set of lines) can maintain the same length as on a globe of corresponding scale. All other lines must be either too long or too short. Accordingly, the scale on a flat map cannot be true everywhere; there will always be different scales in different parts of a map. On world maps or very large areas, variations in scale may be extreme. Most maps seek to preserve either true area relationships (equal area projections) or true angles and shapes (conformal projections); some attempt to achieve overall balance.

Figure 2 **Robinson Projection**

Projections: Selected Examples

Mercator (Fig. 1): This projection is especially useful because all compass directions appear as straight lines, making it a valuable navigational tool. Moreover, every small region conforms to its shape on a globe — hence the name conformal. But because its meridians are evenly-spaced vertical lines which never converge (unlike the globe), the horizontal parallels must be drawn farther and farther apart at higher latitudes to maintain a correct relationship. Only the equator is true to scale, and the size of areas in the higher latitudes is dramatically distorted.

Robinson (Fig. 2): To create the two-page world map in the Maps of the World section, the Robinson projection was used. It combines elements of both conformal and equal area projections to show the whole earth with relatively true shapes and reasonably equal areas.

Conic (Fig. 3): This projection has been used frequently for air navigation charts and to create most of the national and regional maps in this atlas. (See text in margin at right).

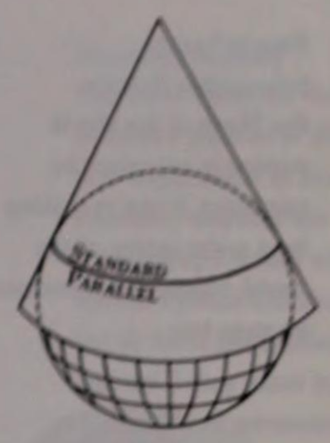


Figure 3 **Conic Projection**

Hammond Optimal Conformal

As its name implies, this new conformal projection (Fig. 4) presents the optimal view of an area by reducing shifts in scale over an entire region to the minimum degree possible. While conformal maps generally preserve all small shapes, large shapes can become very distorted because of varying scales, causing considerable inaccuracy in distance measurements. The concept underlying the Optimal Conformal is that for any region on the globe, there is an ideal projection for which scale variation can be made as small as possible. Consequently, unlike other projections, the Optimal Conformal does not use one standard formula to construct a map. Each map is a unique projection — the optimal projection for that particular area.

After a cartographer defines the subject area, a sophisticated computer program evaluates the size and shape of the region, projecting the most distortion-free map possible. All of the continent maps in this atlas, except Antarctica, have been drawn using the Optimal projection.

Figure 4 **Hammond Optimal Conformal Projection**

Using This Atlas

How to Locate Information Quickly

Our Maps of the World section is organized by continent. If you're looking for a major region of the world, consult the Contents on page two.

World Reference Guide

This concise guide lists the countries of the world alphabetically. If you're looking for the largest scale map of any country, you'll find a page and alpha-numeric reference at a glance, as well as information about each country, including its flag.

Master Index

When you're looking for a specific place or physical feature, your quickest route is the Master Index. This 6,000-entry alphabetical index lists both the page number and alpha-numeric reference for major places and features in Maps of the World.

This new atlas is created from a unique digital database, and its computer-generated maps represent a new phase in map-making technology.

How Computer-Generated Maps Are Made

To build a digital database capable of generating this world atlas, the latitude and longitude of every significant town, river, coastline, natural and political border, transportation network and peak elevation was researched and digitized. Hundreds of millions of data points describing every important geographic feature are organized into thousands of different map feature codes.

There are no maps in this unique system. Rather, it consists entirely of coded points, lines and polygons. To create a map, cartographers simply determine what specific information they wish to show, based upon considerations of scale, size, density and importance of different features.

New technology developed by mathematical physicisı Mitchell Feigenbaum uses fractal geometry to describe and re-configure coastlines, borders and mountain ranges to fit a variety of map scales and projections. Dr. Feigenbaum has also created a computerized type placement program which allows thousands of map labels to be placed accurately in minutes. After these steps have been completed, the computer then draws the final map.

Each section of this atlas has been designed to be both easy and enjoyable to use. Familiarizing yourself with its organization will help you to benefit fully from its use.

World Flags and Reference Guide

This colorful section portrays each nation of the world, its flag, important geographical data, such as size, population and capital, and its location in the Maps of the World section.

World Statistics

World Statistics lists the dimensions of the earth's principal mountains, islands, rivers and lakes, along with other useful geographic information.

Maps of the World

These detailed regional maps are arranged by continent, and introduced by a political map of that continent. The continent maps, which utilize Hammond's new Optimal Conformal projection, are distinguished by individual colors for each country to highlight political divisions.

On the regional maps, different colors and textures highlight distinctive features such as parks, forests, deserts and urban areas. These maps also provide considerable information concerning geographic features and political divisions.

Master Index

This is an A-Z listing of names found on the political maps. It also has its own abbreviation list which, along with other Index keys, appears on page 110.

Map Scales

A map's scale is the relationship of any length on the map to an identical length on the earth's surface. A scale of 1:3,000,000 means that one inch on the map represents 3,000,000 inches (47 miles, 76 km.) on the earth's surface. Thus, a 1:1,000,000 scale is larger than 1:3,000,000, just as 1/1 is larger than 1/3.

The most densely populated areas are shown at a scale of 1:1,170,000, while selected metropolitan areas are covered at either 1:587,000 or 1:1,170,000. Other populous areas are presented at 1:3,500,000 and 1:7,000,000, allowing you to accurately compare areas and distances of similar regions. Remaining regions are scaled at 1:10,500,000. The continent maps, as well as the United States, Canada, Russia, Pacific and World have smaller scales.

Boundary Policies

This atlas observes the boundary policies of the U.S. Department of State. Boundary disputes are customarily handled with a special symbol treatment, but de facto boundaries are favored if they seem to have any degree of permanence, in the belief that boundaries should reflect current geographic and political realities. The portrayal of independent nations in the atlas follows their recognition by the United Nations and/or the United States government.

Hammond also uses accepted conventional names for certain major foreign places. Usually, space permits the inclusion of the local form in parentheses. To make the maps more readily understandable to English-speaking readers, many foreign physical features are translated into more recognizable English forms.

A Word About Names

Our source for all foreign names and physical names in the United States is the decision lists of the U.S. Board of Geographic Names, which contain hundreds of thousands of place names. If a place is not listed, the Atlas follows the name form appearing on official foreign maps or in official gazetteers of the country concerned. For rendering domestic city, town and village names, this atlas follows the forms and spelling of the U.S. Postal Service.

Largest City: Koror
Highest Point: Mt. Ngerchelchauus
Monetary Unit: U.S. dollar

World Flags and Reference Guide

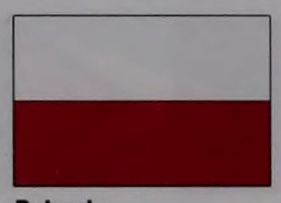
Panama
Page/Location: 103/F4
Area: 30,193 sq. mi.
78,200 sq. km.
Population: 3,000,463
Capital: Panamá
Largest City: Panamá
Highest Point: Barú
Monetary Unit: balboa

Papua New Guinea
Page/Location: 68/D5
Area: 178,259 sq. mi.
461,690 sq. km.
Population: 5,420,280
Capital: Port Moresby
Largest City: Port Moresby
Highest Point: Mt. Wilhelm
Monetary Unit: kina

Paraguay
Page/Location: 105/D5
Area: 157,047 sq. mi.
406,752 sq. km.
Population: 6,191,368
Capital: Asunción
Largest City: Asunción
Highest Point: Cerro Pero
Monetary Unit: guaraní

Peru
Page/Location: 106/C5
Area: 496,222 sq. mi.
1,285,215 sq. km.
Population: 28,863,494
Capital: Lima
Largest City: Lima
Highest Point: Nevado Huascarán
Monetary Unit: nuevo sol

Philippines
Page/Location: 48/M8
Area: 115,830 sq. mi.
300,000 sq. km.
Population: 86,241,697
Capital: Manila
Largest City: Manila
Highest Point: Mt. Apo
Monetary Unit: Philippine peso

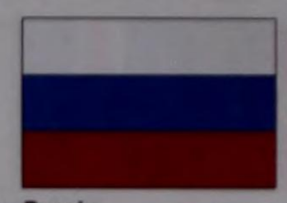


Poland
Page/Location: 27/K2
Area: 120,725 sq. mi.
312,678 sq. km.
Population: 38,626,349
Capital: Warsaw
Largest City: Warsaw
Highest Point: Rysy
Monetary Unit: zloty

Portugal
Page/Location: 34/A3
Area: 35,549 sq. mi.
92,072 sq. km.
Population: 10,119,250
Capital: Lisbon
Largest City: Lisbon
Highest Point: Serra da Estrela
Monetary Unit: euro

Qatar
Page/Location: 52/F3
Area: 4,247 sq. mi.
11,000 sq. km.
Population: 840,290
Capital: Doha
Largest City: Doha
Highest Point: Ţuwayyir al Ḥamīr
Monetary Unit: Qatari riyal

Romania
Page/Location: 41/F3
Area: 91,699 sq. mi.
237,500 sq. km.
Population: 22,355,551
Capital: Bucharest
Largest City: Bucharest
Highest Point: Moldoveanu
Monetary Unit: lei



Russia
Page/Location: 46/H3
Area: 6,592,812 sq. mi.
17,075,400 sq. km.
Population: 144,112,353
Capital: Moscow
Largest City: Moscow
Highest Point: El'brus
Monetary Unit: Russian ruble

Rwanda
Page/Location: 82/E1
Area: 10,169 sq. mi.
26,337 sq. km.
Population: 7,954,013
Capital: Kigali
Largest City: Kigali
Highest Point: Karisimbi
Monetary Unit: Rwanda franc

Saint Kitts and Nevis
Page/Location: 104/F3
Area: 104 sq. mi.
269 sq. km.
Population: 38,836
Capital: Basseterre
Largest City: Basseterre
Highest Point: Mt. Liamuiga
Monetary Unit: East Caribbean dollar

Saint Lucia
Page/Location: 104/F4
Area: 238 sq. mi.
616 sq. km.
Population: 164,213
Capital: Castries
Largest City: Castries
Highest Point: Mt. Gimie
Monetary Unit: East Caribbean dollar

Saint Vincent and the Granadines
Page/Location: 104/F4
Area: 131 sq. mi.
340 sq. km.
Population: 117,193
Capital: Kingstown
Largest City: Kingstown
Highest Point: Soufière
Monetary Unit: East Caribbean dollar

Samoa
Page/Location: 69/H6
Area: 1,104 sq. mi.
2,860 sq. km.
Population: 177,714
Capital: Apia
Largest City: Apia
Highest Point: Mt. Silisili
Monetary Unit: tala

San Marino
Page/Location: 33/K5
Area: 23.4 sq. mi.
60.6 sq. km.
Population: 28,503
Capital: San Marino
Largest City: San Marino
Highest Point: Monte Titano
Monetary Unit: euro

São Tomé and Príncipe
Page/Location: 76/G7
Area: 371 sq. mi.

AREA OF OPTIMIZATION

The red band which surrounds this map defines the "Area of Optimization." Within this bounding curve is the most accurate conformal map that can be made of the region. Outside the optimized area, distortion increases rapidly, and tears or other irregularities in the grid may occur.

AREA OF OPTIMIZATION

The red band which surrounds this map defines the "Area of Optimization." Within this bounding curve is the most accurate conformal map that can be made of the region. Outside the optimized area, distortion increases rapidly, and tears or other irregularities in the grid may occur.

AREA OF OPTIMIZATION

The red band which surrounds this map defines the "Area of Optimization." Within this bounding curve is the most accurate conformal map that can be made of the region. Outside the optimized area, distortion increases rapidly, and tears or other irregularities in the grid may occur.

AREA OF OPTIMIZATION

The red band which surrounds this map defines the "Area of Optimization." Within this bounding curve is the most accurate conformal map that can be made of the region. Outside the optimized area, distortion increases rapidly, and tears or other irregularities in the grid may occur.

AREA OF OPTIMIZATION

The red band which surrounds this map defines the "Area of Optimization." Within this bounding curve is the most accurate conformal map that can be made of the region. Outside the optimized area, distortion increases rapidly, and tears or other irregularities in the grid may occur.

Index of the World

This index lists places and geographic features found in the atlas. Every name is followed by the country or area to which it belongs. Except for cities, towns, countries and cultural areas, all entries include a reference to feature type, such as province, river, island, peak, and so on. The page number and alpha-numeric code appear in blue to the right of each listing. The page number directs you to the largest scale map on which the name can be found. The code refers to the grid squares formed by the horizontal and vertical lines of latitude and longitude on each map. Following the letters from left to right, and the numbers from top to bottom, helps you to locate quickly the square containing the place or feature. Inset maps have their own alpha-numeric codes. Names that are accompanied by a point symbol are indexed to the symbol's location on the map. Other names are indexed to the initial letter of the name. The primary abbreviations used in this index are listed below.

Index Abbreviations

A
- **Ab,Can** Alberta
- **Afg.** Afghanistan
- **Afr.** Africa
- **Ak,US** Alaska
- **Al,US** Alabama
- **Alb.** Albania
- **Alg.** Algeria
- **And.** Andorra
- **Ang.** Angola
- **Angu.** Anguilla
- **Ant.** Antarctica
- **Anti.** Antigua and Barbuda
- **Ar,US** Arkansas
- **Arch.** Archipelago
- **Arg.** Argentina
- **Arm.** Armenia
- **Aru.** Aruba
- **ASam.** American Samoa
- **Ash.** Ashmore and Cartier Islands
- **Aus.** Austria
- **Austl.** Australia
- **Az,US** Arizona
- **Azer.** Azerbaijan
- **Azor.** Azores

B
- **Bahm.** Bahamas, The
- **Bahr.** Bahrain
- **Bang.** Bangladesh
- **Bar.** Barbados
- **BC,Can** British Columbia
- **Bela.** Belarus
- **Belg.** Belgium
- **Belz.** Belize
- **Ben.** Benin
- **Berm.** Bermuda
- **Bhu.** Bhutan
- **Bol.** Bolivia
- **Bosn.** Bosnia and Herzegovina
- **Bots.** Botswana
- **Braz.** Brazil
- **Bru.** Brunei
- **Bul.** Bulgaria
- **Burk.** Burkina Faso
- **Buru.** Burundi
- **BVI** British Virgin Islands

C
- **Ca,US** California
- **CAfr.** Central African Republic
- **Camb.** Cambodia
- **Camr.** Cameroon
- **Can.** Canada
- **Can.** Canal
- **Canl.** Canary Islands
- **Cap.** Capital
- **Cap. Terr.** Capital Territory
- **Cay.** Cayman Islands
- **C.d'Iv.** Côte d'Ivoire
- **Chan.** Channel
- **Chl.** Channel Islands
- **Co,US** Colorado
- **Col.** Colombia
- **Com.** Comoros
- **Cont.** Continent
- **CpV.** Cape Verde Islands
- **CR** Costa Rica
- **Cr.** Creek
- **Cro.** Croatia
- **Ct,US** Connecticut
- **Cyp.** Cyprus
- **Czh.** Czech Republic

D
- **DC,US** District of Columbia
- **De,US** Delaware
- **Den.** Denmark
- **Depr.** Depression
- **Des.** Desert
- **Dist.** District
- **Djib.** Djibouti
- **Dom.** Dominica
- **Dpcy.** Dependency
- **D.R.Congo** Democratic Republic of the Congo
- **DRep.** Dominican Republic

E
- **Ecu.** Ecuador
- **Eng,UK** England
- **EqG.** Equatorial Guinea
- **Erit.** Eritrea
- **ESal.** El Salvador
- **Est.** Estonia
- **Eth.** Ethiopia
- **Eur.** Europe

F
- **Falk.** Falkland Islands
- **Far.** Faroe Islands
- **Fed. Dist.** Federal District
- **Fin.** Finland
- **Fl,US** Florida
- **Fr.** France
- **FrG.** French Guiana
- **FrPol.** French Polynesia
- **FYROM** Former Yugoslav Rep. of Macedonia

G
- **Ga,US** Georgia
- **Gam.** Gambia, The
- **Gaza** Gaza Strip
- **GBis.** Guinea-Bissau
- **Geo.** Georgia
- **Ger.** Germany
- **Gha.** Ghana
- **Gib.** Gibraltar
- **Gre.** Greece
- **Grld.** Greenland
- **Gren.** Grenada
- **Grsld.** Grassland
- **Guad.** Guadeloupe
- **Guat.** Guatemala
- **Gui.** Guinea
- **Guy.** Guyana

H
- **Har.** Harbor
- **Hi,US** Hawaii
- **Hon.** Honduras
- **Hts.** Heights
- **Hun.** Hungary

I
- **Ia,US** Iowa
- **Ice.** Iceland
- **Id,US** Idaho
- **Il,US** Illinois
- **IM** Isle of Man
- **In,US** Indiana
- **Indo.** Indonesia
- **Int'l** International
- **Ire.** Ireland
- **Isl., Isls.** Island, Islands
- **Isr.** Israel
- **Isth.** Isthmus
- **It.** Italy

J
- **Jam.** Jamaica
- **Jor.** Jordan

K
- **Kaz.** Kazakhstan
- **Kiri.** Kiribati
- **Ks,US** Kansas
- **Kuw.** Kuwait
- **Ky,US** Kentucky
- **Kyr.** Kyrgyzstan

L
- **La,US** Louisiana
- **Lat.** Latvia
- **Lcht.** Liechtenstein
- **Leb.** Lebanon
- **Les.** Lesotho
- **Libr.** Liberia
- **Lith.** Lithuania
- **Lux.** Luxembourg

M
- **Ma,US** Massachusetts
- **Madg.** Madagascar
- **Madr.** Madeira
- **Malay.** Malaysia
- **Mald.** Maldives
- **Malw.** Malawi
- **Mart.** Martinique
- **May.** Mayotte
- **Mb,Can** Manitoba
- **Md,US** Maryland
- **Me,US** Maine
- **Mex.** Mexico
- **Mi,US** Michigan
- **Micr.** Micronesia, Federated States of
- **Mn,US** Minnesota

- **Mol.** Moldova
- **Mon.** Monument
- **Mona.** Monaco
- **Mong.** Mongolia
- **Monts.** Montserrat
- **Mor.** Morocco
- **Moz.** Mozambique
- **Mrsh.** Marshall Islands
- **Mrta.** Mauritania
- **Mrts.** Mauritius
- **Ms,US** Mississippi
- **Mt.** Mount
- **Mt,US** Montana
- **Mtn., Mts.** Mountain, Mountains

N
- **NAm.** North America
- **Namb.** Namibia
- **NAnt.** Netherlands Antilles
- **Nat'l** National
- **NB,Can** New Brunswick
- **NC,US** North Carolina
- **NCal.** New Caledonia
- **ND,US** North Dakota
- **Ne,US** Nebraska
- **Neth.** Netherlands
- **Nf,Can** Newfoundland and Labrador
- **Nga.** Nigeria
- **NH,US** New Hampshire
- **NI,UK** Northern Ireland
- **Nic.** Nicaragua
- **NJ,US** New Jersey
- **NKor.** North Korea
- **NM,US** New Mexico
- **NMar.** Northern Mariana Islands
- **Nor.** Norway
- **NP** National Park
- **NS,Can** Nova Scotia
- **Nv,US** Nevada
- **NW,Can** Northwest Territories
- **NY,US** New York
- **NZ** New Zealand

O
- **Oh,US** Ohio
- **Ok,US** Oklahoma
- **On,Can** Ontario
- **Or,US** Oregon

P
- **Pa,US** Pennsylvania
- **PacUS** Pacific Islands, U.S.
- **Pak.** Pakistan
- **Pan.** Panama
- **Par.** Paraguay
- **PE,Can** Prince Edward Island
- **Pen.** Peninsula
- **Phil.** Philippines
- **Phys. Reg.** Physical Region
- **Pitc.** Pitcairn Islands
- **Plat.** Plateau
- **PNG** Papua New Guinea
- **Pol.** Poland
- **Port.** Portugal
- **PR** Puerto Rico
- **Prov.** Province
- **Pt.** Point

Q
- **Qu,Can** Quebec

R
- **Rec.** Recreation(al)
- **Reg.** Region
- **Rep.** Republic
- **Res.** Reservoir, Reservation
- **Reun.** Réunion
- **RI,US** Rhode Island
- **Riv.** River
- **Rom.** Romania
- **Rsv.** Reserve
- **Rus.** Russia
- **Rwa.** Rwanda

S
- **SAfr.** South Africa
- **Sam.** Samoa
- **SAm.** South America
- **SaoT.** São Tomé and Príncipe
- **SAr.** Saudi Arabia

Time Zones of the World

World Cities: Standard Time Differences

When it is 12:00 noon in London, England, the standard time in other cities is as follows:

City	Time	City	Time	City	Time	City	Time	City	Time	City	Time
Accra, Ghana	Noon	Buenos Aires, Argentina	9 a.m.	Hanoi, Vietnam	7 p.m.	Lisbon, Portugal	Noon	Paris, France	1 p.m.	Seattle, Washington	4 a.m.
Adelaide, Australia	9:30 p.m.	Cairo, Egypt	2 p.m.	Havana, Cuba	7 a.m.	Los Angeles, California	4 a.m.	Perth, Australia	8 p.m.	Seoul, South Korea	9 p.m.
Algiers, Algeria	1 p.m.	Calcutta, India	5:30 p.m.	Helsinki, Finland	2 p.m.	Madrid, Spain	1 p.m.	Phoenix, Arizona	5 a.m.	Singapore	7 p.m.
Amsterdam, Netherlands	1 p.m.	Cape Town, South Africa	2 p.m.	Hong Kong, China	8 p.m.	Manila, Philippines	8 p.m.	Ponta Delgada, Azores	11 a.m.	Stockholm, Sweden	1 p.m.
Anchorage, Alaska	3 a.m.	Caracas, Venezuela	8 a.m.	Honolulu, Hawaii	2 a.m.	Mexico, Mexico	6 a.m.	Prague, Czech Republic	1 p.m.	Sydney, Australia	10 p.m.
Athens, Greece	2 p.m.	Chicago, Illinois	6 a.m.	Houston, Texas	6 a.m.	Miami, Florida	7 a.m.	Recife, Brazil	9 a.m.	T'aipei, Taiwan	8 p.m.
Atlanta, Georgia	7 a.m.	Copenhagen, Denmark	1 p.m.	Istanbul, Turkey	2 p.m.	Minneapolis, Minnesota	6 a.m.	Riga, Latvia	2 p.m.	Tehran, Iran	3:30 p.m.
Baghdad, Iraq	3 p.m.	Dakar, Senegal	Noon	Jakarta, Indonesia	7 p.m.	Montevideo, Uruguay	9 a.m.	Río de Janeiro, Brazil	9 a.m.	Tokyo, Japan	9 p.m.
Bangkok, Thailand	7 p.m.	Damascus, Syria	3 p.m.	Jerusalem, Israel	2 p.m.	Montréal, Québec	7 a.m.	Rome, Italy	1 p.m.	Toronto, Ontario	7 a.m.
Beijing, China	8 p.m.	Denver, Colorado	5 a.m.	Kabul, Afghanistan	4:30 p.m.	Moscow, Russia	3 p.m.	Saint John's, Newf.	8:30 a.m.	Vancouver, B.C.	4 a.m.
Belgrade, Yugoslavia	1 p.m.	Detroit, Michigan	7 a.m.	Karachi, Pakistan	5 p.m.	Mumbai, India	5:30 p.m.	Saint Louis, Missouri	6 a.m.	Vienna, Austria	1 p.m.
Berlin, Germany	1 p.m.	Dublin, Ireland	Noon	Kiev, Ukraine	2 p.m.	Nairobi, Kenya	3 p.m.	Saint Petersburg, Russia	3 p.m.	Warsaw, Poland	1 p.m.
Bogotá, Colombia	7 a.m.	Edmonton, Alberta	5 a.m.	Kingston, Jamaica	7 a.m.	Nassau, Bahamas	7 a.m.	Salt Lake City, Utah	5 a.m.	Washington, D.C.	7 a.m.
Boston, Massachusetts	7 a.m.	El Paso, Texas	5 a.m.	Kinshasa, D.R. Congo	1 p.m.	New York, New York	7 a.m.	San Francisco, California	4 a.m.	Wellington, N.Z.	Midnight
Brussels, Belgium	1 p.m.	Glasgow, Scotland	Noon	Lagos, Nigeria	1 p.m.	Oslo, Norway	1 p.m.	San Juan, Puerto Rico	8 a.m.	Winnipeg, Manitoba	6 a.m.
Bucharest, Romania	2 p.m.	Halifax, Nova Scotia	8 a.m.	La Paz, Bolivia	8 a.m.	Panamá, Panama	7 a.m.	Santiago, Chile	8 a.m.	Yangon, Myanmar	6:30 p.m.
Budapest, Hungary	1 p.m.	Hamilton, Bermuda	8 a.m.	Lima, Peru	7 a.m.	Papeete, Tahiti	2 a.m.	São Paulo, Brazil	9 a.m.	Zürich, Switzerland	1 p.m.

Explorer World Atlas

Hammond Explorer World Atlas – a new sophisticated, value-priced atlas, features a revolutionary collection of maps created with technology pioneered by Hammond. At the heart of this revolution is a computerized mapmaking system comprised of a vast digital database containing the latitude and longitude of every significant geographic feature on earth. The Hammond Explorer World atlas also features a unique map projection, Hammond's Optimal Conformal, which produces the most precise maps of the continents ever seen. The result is an incomparably accurate, up-to-the-minute portrait of our fast-changing world.

The world's most accurate, up-to-date geographic reference available!

- 90 pages of astonishingly beautiful and detailed world maps achieve an unmatched level of clarity and legibility.
- All maps have been updated to reflect the most current names and political status of the world's nations.
- An all-new reference guide featuring national flags, the latest population figures, area, capital, largest city, highest point and monetary unit for all 193 independent nations of the world.
- Exclusive World TerraScape map displays the earth's land and water surfaces with stunning three-dimensional realism.
- Convenient features include a user guide, an easy-to-read 13,000-entry master index, and the latest world statistics.

We couldn't have said it better ourselves:

The Washington Post Book World:

"Hammond's newfangled digital wonders demonstrate how far the science of cartography has come in four centuries."

"Stunning...Computer-assisted maps of the world."

Detroit Free Press:

"Exceptionally detailed maps..."

Fortune:

"... Gorgeous, computer-generated maps..."
